College Information and Admissions Website

Project Report

1. Introduction

The College Information and Admissions Website is a simple webpage designed to provide students with basic information about NRI Institute of Technology. It helps students explore the college, learn about the courses offered, view faculty information, and understand the admission process.

2. Technologies Used

- **HTML:** Used to create the structure and different sections of the webpage.
- **CSS:** Used to style the webpage, add colours, arrange the content, and create hover effects.

3. Features of the Website

- **Home:** A welcome section with a button to view admission information.
- **About College:** Provides a brief introduction to the college and its learning environment.
- **College Highlights:** Displays information about learning facilities, computer labs, and student activities.
- **Courses Offered:** Lists different engineering courses, including CSE, ECE, EEE, Mechanical, and Civil Engineering.
- **Faculty Information:** Provides a basic overview of the teaching departments.
- **Admissions:** Includes general admission information and a list of documents students may need.
- **Contact Information:** Contains a section for the college's location, email, and phone number.

4. Design and Layout

I used a blue and teal colour combination to give the webpage a clean appearance. The navigation bar helps users move between different sections easily. CSS cards are used to organise information, and hover effects make the page more interactive. The layout also uses flexible positioning to help arrange the cards neatly on different screen sizes.

5. Conclusion

This project helped me understand how HTML and CSS work together to create a webpage. I learned how to organise content into sections, design a navigation bar, style information cards, and add simple interactive effects. This project also gave me practical experience in building a website from scratch.
